DNA test clears rape suspect

By Stephen Hadach

—A suspect in a 1994 rape and murder case who spent a 42-year jail term behind the Mason-Ross Federal Public Library in Toledo as the man whose wife reported witness rape during the crime.

The test also ends police hopes the wrong man caused the prosecution suit.

Because of the FBI's DNA test results, Richard George Thompson, James Miller Jr., and Robert Paul Filler, 61, 54 and 56, respectively, who had been charged with rape and murder in 1994, were released from jail and returned to their families.

—Last year, local rights news — and Filler's

brother, Stephen Miller, wrote told of the test results. "I knew it was going to be a success," he said.

The test, which was conducted by the FBI, showed that the DNA of the man who was charged with the crime, Miller's, was not the same as the DNA of the man who was charged with the crime. The test also showed that the DNA of the man who was charged with the crime, Miller's, was not the same as the DNA of the man who was charged with the crime.

While the DNA test results were being processed, the FBI was also conducting an investigation of the case.

The FBI FILED — investigation of the case was also conducted by the FBI. The FBI FILED — investigation of the case was also conducted by the FBI. The FBI FILED — investigation of the case was also conducted by the FBI. The FBI FILED — investigation of the case was also conducted by the FBI.

Both women were raped three times in an apartment house situated on Cleveland Street and the avenue.

He already had a very good probability cause to believe he had the right man, said Detective Lt. Charles Thompson, who was in charge of the investigation of the case and had a large role in the case.

He said he was in the process of the case.

—We may get the person responsible but we don't know who it is. We may get the person responsible but we don't know who it is. We may get the person responsible but we don't know who it is. We may get the person responsible but we don't know who it is.

MANASSASFIELD — DNA tests show that the man who raped a 32-year-old woman behind the Manassas-Fairfield Public Library in March is the same one who raped another woman near downtown in January.

But the tests also show police have the wrong man, county prosecutors say.

Because of the FBI's DNA test results, Richland County Prosecutor James Meyer Jr. confirmed Wednesday he plans to dismiss charges against Earl Fuller, 38, of 348 W. Sixth St., who had been identified in police files by both victims as their sexual rapist.

"I feel damn good right now," said Fuller's

mother, Bernice Shaw, when told of the test results. "I knew all along he was innocent," she said, smiling. "He won't tell me, but he spent more time in jail awaiting trial on the charges, wouldn't talk about his case until he was certain he could believe the FBI's findings."

"I've been through a lot," he said.

While the DOA test from Palmer, it also blows open the investigation of two of what police say are the most brutal sexual assaults ever reported in Massachusetts—including the one behind the controversial theory in which the rapist was seen on a park bench.

Both women were raped three times by an assailant who robbed and threatened them, and who manfully resisted in each as "Dede" throughout the assault.

"We certainly had very good probable cause to believe we had the right man," said detective Lt. David Monerney, noting Foster is the physical description of the assailant and had a bicycle with a pump seat and handlebars in the garage at his home.

"We want to get the person responsible, but we don't want the woman's name," Monerney said. "We just glad that we didn't go to trial and commit a crime. Now we just continue on as if there's nothing at large."

Evidence Collection and Preservation

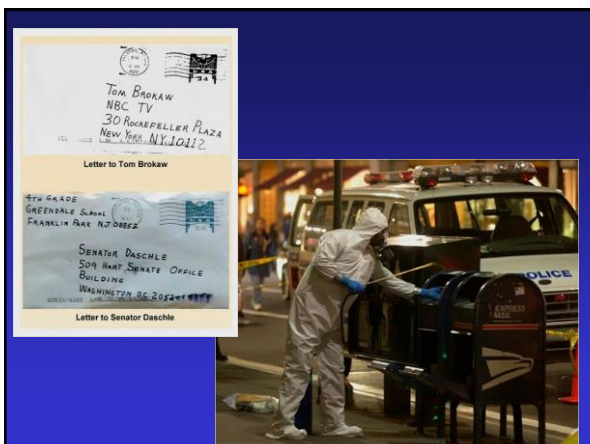

Forensic Entomology

Forensic entomology is based on the analysis of insects and other invertebrates sequentially colonizing a corpse as decomposition progresses, and on the developmental stages of their offspring.

Anthrax Attacks - 2001

- Florida
- New York
- Washington, DC

Demonstrated the need for a coordinated and dedicated national capability for bioforensic analyses to support biocrime/ bioterror investigations.

Confirmed Anthrax Cases

Photographs of victims of anthrax poisoning through the Centers for Disease Control and Prevention. Other suspected cases remain unconfirmed by the CDC. They include: two members of the New York Postal and a second NBC worker.

Victim	Name	Location	Confirmed	Status
Bob Stevens, 43	Inhalant	American Media, Boca Raton	Oct. 4	Died Oct. 5
Erica O'Connor, 38	Skin	NBC in Manhattan	Oct. 12	Recovering
Boy, 7 months	Skin	ABC in Manhattan	Oct. 15	Recovering
Unsettled States, 73	Inhalant	American Media, Boca Raton	Oct. 15	Late hospital
Cathy Padden, 27	Skin	CBS in Manhattan	Oct. 18	Recovering
Teresa Hefner, 32	Skin	West Trenton post office	Oct. 18	Recovering
Patrick O'Donnell, 35	Skin	Hamilton Township mail center, N.J.	Oct. 19	Recovering
Larry McDevitt, 57	Inhalant	Bethwood mail center, D.C.	Oct. 21	Hospitalized
Unsettled man	Inhalant	Bethwood mail center, D.C.	Oct. 22	Hospitalized
Thomas L. Morris Jr., 35	Inhalant	Bethwood mail center, D.C.	Oct. 23	Died Oct. 25
Joseph Curran Jr., 47	Inhalant	Bethwood mail center, D.C.	Oct. 23	Died Oct. 25
Unsettled worker, 59	Inhalant	State Department mail center, D.C.	Oct. 25	Hospitalized
Unsettled woman, 55	Inhalant	Hamilton Township mail center, N.J.	Oct. 28	Hospitalized
Non-postal worker	Skin	Wells-Road Postbox, N.J.	Oct. 29	Late hospital
Unsettled worker	Inhalant	Hamilton Township mail center, N.J.	Oct. 30	Late hospital
Kathy Higgins, 65	Inhalant	Manhattan Eye, Ear & Throat Hospital	Oct. 30	Died Oct. 31
